Package 'LRcellTypeMarkers'

September 19, 2024

Type Package

Title Marker gene information for LRcell R Bioconductor package

Version 1.12.0

Date 2020-02-25

BugReports <https://github.com/marvinquiet/LRcellTypeMarkers/issues>

GitURL https://github.com/marvinquiet/LRcellTypeMarkers

Description This is an external ExperimentData package for LRcell. This data
package contains the gene enrichment scores calculated from scRNA-seq dataset
which indicates the gene enrichment of each cell type in certain brain region.
LRcell package is used to identify specific sub-cell types that drives the
changes observed in a bulk RNA-seq differential gene expression experiment.

LRcellTypeMarkers　　　　*Marker gene information for LRcell.*

Description

This is an external ExperimentData package for LRcell. This data package contains the gene enrichment scores calculated from scRNA-seq dataset which indicates the gene enrichment of each cell type in certain brain region. LRcell package is used to identify specific sub-cell types that drives the changes observed in a bulk RNA-seq differential gene expression experiment. For more details, please visit: https://github.com/marvinquiet/LRcell.

Details

See the vignette for examples of extracting and using these data.

browseVignettes("LRcellTypeMarkers")

Details of how these data were created are in the scripts/ directory of the source package.

The current release includes the following datasets:

Mouse Whole Brain Marker Genes Gene enrichment scores calculated from Mouse Adult Whole Brain scRNA-seq dataset. The dataset contains 15,976 common genes among 9 brain regions. According to original cell type annotation, we computed the gene enrichment scores for each brain region. The 9 brain regions are: Frontal Cortex (EH4548), Cerebellum (EH4549), Entopeduncular (EH4550), Globus Pallidus (EH4551), Posterior Cortex (EH4552), Striatum (EH4553), Substantia Nigra (EH4554), Thalamus (EH4555) and Hippocampus (EH4556).

Human Prefrontal Cortex Marker Genes Gene enrichment scores calculated from healthy human prefrontal cortex scRNA-seq dataset (EH4557). Original paper annotated the cell types based on prior knowledge which contains 26 valid sub-cell types (clusters).

Examples

```
library(ExperimentHub)
eh <- ExperimentHub()
myfiles <- query(eh, "LRcellTypeMarkers")
## download resource
myfiles[[1]]  ## load the first resource
myfiles[['EH4548']]  ## load by EH id
```
